

VIP event email status and sends

These operations support private invitation events and invitation-capacity VIP meals, including breakfasts, lunches, and dinners. The caller must manage the event.

- `GET /api/agents/v1/vip_event_emails/list`: requires `meetup_token`. Optionally filter by `client_token`; paginate using `limit` (maximum 100) and `offset`. Returns all ten attendee lifecycle types even when unavailable: invitation, confirmation, waitlist, cancellation, five_day_reminder, day_before, day_of, check_in, survey, and survey_results.
- `GET /api/agents/v1/vip_event_emails/preview`: requires `meetup_token`, `client_token`, and `message_type`. Returns the exact stored sent copy or current template with send eligibility.
- `POST /api/agents/v1/vip_event_emails/send`: requires the same three fields and `confirm: true`. Sends only that attendee's selected unsent email. A repeated send returns `email_not_sendable` (HTTP 409); it never resends a delivered type. In-progress and unknown outcomes also block retries.

The catalog includes `sent`, `sent_at`, `mail_log_token`, `delivery_state`, `delivery_label`, `applicable`, `sendable`, `blocked_reason`, and event timezone. `sent` means provider acceptance, while `delivery_label` separately reports provider delivery, bounce, or complaint evidence. Invitation sends made externally remain in the invitation ledger and do not falsely count as a platform email.

Day-before emails may be triggered throughout the previous event-local date, including 7 PM for an 8 AM breakfast. Automatic delivery normally begins at the same local time the previous day and expires at event-local midnight.

Day-of emails require the event's local date and close one hour before start.

An 8 AM event has an automatic window from 6 AM until 7 AM, exclusive.

A final timing check runs immediately before the provider call to prevent stale queued reminders crossing midnight or the advance-notice cutoff.

Invitation, confirmation, and waitlist messages require a future event.

Check-in follow-up requires check-in and the existing follow-up window.

Survey emails require the event to have ended and an open, unanswered survey; results require available community results and the recipient's email preference.

A named organizer invitation to the same address establishes email eligibility for that VIP event. It does not change account verification. Bounce, complaint, workspace email-disable, and applicable subscription rules still apply.
